PRV University Seminar

A Practical Approach to Understanding and Specifying PRVs

Join ECI for one of three PRV University seminars! Plant managers, technicians and reliability professionals will learn how to specify reliable pressure relief valves. This informative session will review how proper sizing, selection and maintenance enhances safety, and improves your operations.

Correct understanding of function and selection are critical for reliable valve performance. Proper sizing, selection and maintenance of PRVs is crucial to process control loop operation. Our presenter will share his knowledge of and experience with PRVs through lectures and question-and-answer sessions.

Seminar Topics

- Terminology
- Operation
- Codes and Standards
- PRV Sizing
- Maintenance and Reliability

Presenter

Mark Martillaro is a Business Development Manager for Emerson Automation Solutions. He is the region's technical expert for Emerson's pressure management products, including Anderson Greenwood, Crosby and Varec pressure relief devices. Mark started his career in the United States Marine Corps as a Cryogenic Technician. From there he entered the process control industry and has become a respected pressure relief valve subject matter expert.
